IN COLLABORATION WITH
GALILEE INTERNATIONAL MANAGEMENT INSTITUTE
ISREAL**

PRESENTS

AN INTERNATIONAL COURSE ON CLIMATE CHANGE AND SUSTAINABLE ENVIRONMENT

About the Centre

Centre of Excellence in Agricultural Development and Sustainable Environment (CEADESE) is a World Bank sponsored Africa Centre of Excellence which was established in 2013 at the Federal University of Agriculture, Abeokuta. The objective of CEADESE is to strengthen human and material capacity for Agricultural development and sustainability of the Environment. The Centre is focused on postgraduate education through teaching, learning and research excellence. The Centre places high emphasis on industrial linkages and collaborative engagement with the end users.

About the Course

It is quite evident that developing countries are the most ill prepared to face the challenges of climate change and therefore the most vulnerable to its adverse effects. This becomes more worrisome given that their economies are based largely on climate-sensitive and natural resources-dependent sectors. One action point to address the challenge will be to improve levels of awareness in order to improve on the skills gap, as well as to boost resources and relevant capabilities at all levels. Against this backdrop, an interactive workshop has been put together to look holistically at issues of climate change.

Workshop Objectives

The objective of this workshop is to expose participants to recent developments in the area of Climate Change and build a critical mass of next generation experts with robust understanding to address climate change issues. Participants would have the opportunity to learn new technologies and develop cross-cutting networks on climate change. The course will also serve

as a means of boosting skills and human capacity in order to provide the much needed expertise for Institutions and individuals, using Israeli experience.

Expected Learning Outcomes

The workshop is expected to ultimately extend the frontiers of knowledge, foster international exchange and cooperation, and deliver hand-on skills to promote sustainable management of natural resources and ecosystems and integrate sustainable development policies at national and local levels. Some of the topics to be addressed are: Clean Development Mechanism (CDM), Climate change and water resources planning, Technologies and approaches for the solution of solid waste problems, Technological solutions for water pollution, Hazardous waste management, and Renewable energy

Date

Monday 6th – Friday, 11th August, 2018
9:00 AM – 4: 30 PM

Venue

International Scholars Resource Centre (ISREC),
Federal University of Agriculture, Abeokuta, Ogun State.
